

How Durable is the Ace Attack?

There are many quality ball machines in the tennis market. The Ace Attack is made by Sports Attack the same way it makes its popular high-end machines for baseball, softball, football, soccer, and volleyball since 1994. The fields for most of these sports are often dusty, dirty, gritty, grassy, and wet. Yes, the Ace Attack is arguably the most durable tennis machine in the world. Here's why:

- 1. The motor is internally sealed to keep dust/dirt out. The result is a more reliable machine over more years whether used on hard, clay, or grass tennis courts!**
- 2. All electronics are sealed from moisture and ball fuzz.**
- 3. All metal parts of the body of the machine are powder coated with polyester paint, a "built proof finish" to withstand moisture and salt corrosion in the harshest of environments.**
- 4. The three ball throwing wheels are made from the same material as Sports Attack baseball and softball machines. They are among the most durable wheels made.**
- 5. The ball hopper is uniquely see-through to make it easy to check on remaining balls. But, is it strong? Absolutely. The polycarbonate plastic is the same as bullet proof glass.**

Oncourt Offcourt is the Exclusive Worldwide Distributor for Ace Attack Ball Machines.
