“Jingles Bell Balls”

PTR and USPTA Master Pro Joe Dinoffer announced the release of a new sound-producing foam ball for tennis called “Jingles Bell Balls.” According to Dinoffer, Jingles Bell Balls are softball-sized 100% density foam balls that have three distinctive benefits.

First, for the sight-impaired player, the noise when the ball bounces or strikes the racket allows for auditory recognition. Samples have been tested at the 2014 Blind Tennis Conference held in Texas with international representation. Second, due to the sound, beginning players will develop their rhythm skills subconsciously. Since tennis is a rhythm-based sport, this feature can have powerful learning benefits. And, third, playing with Jingles is just plain fun!
