

The Travel Airzone creates a raised net to help players visually learn to hit with more net clearance. This is the first ultra-portable way to raise a tennis net for accelerated learning. Great for players, pros, and coaches with limited storage space or to use while traveling. Your Travel Airzone set includes the following:

1. Two 3-part Poles
2. Bungee
3. Travel Airzone carry case

The 3-part Telescopic poles can be placed anywhere between the singles sideline and doubles sideline. To secure to the tennis net, just weave through the net and angle slightly outwards so the pole ends up close to vertical. Connect the bungee to the top of the pole.

Use the yellow bungee to create a line above the tennis net that can be hit over or under, depending on the desired exercise or drill. **NOTE:** The Travel Airzone can be used at two optional heights by connecting all 3 pole sections for the highest position OR folding one over as shown for a lower height visual guide.

At lower height,
using 2-section height.

At 3-section upper height;
bungee knotted to shorten length
to singles court.
