

MULTICOURT BARRIER SYSTEM

Court Barriers for Pickleball and Other Sports

The MultiCourt Barrier System creates boundaries around pickleball courts to keep balls in bounds. This system can also be used for multiple sports and to guide traffic flow at events.

A Flexible Barrier System for One or More Courts

The MultiCourt Barrier system is an easy-to-assemble, weather-resistant, scalable barrier system. Create boundaries for one court, two courts or a whole tournament's worth of courts. Its durable metal poles slide into thick sleeves to hold the boundary net. Heavy-duty bases and base adapters can be configured for multiple layouts.

A standard recommended MultiCourt Barrier package assembles to 60 feet by 40 feet. This allows for the regulation 20 feet x 44 feet pickleball court, with 7 barriers along the length (the 60-foot side) and 5 barriers along the width (the 40-foot side) with a 4-foot opening for players to enter and exit along each long side.

"We used the MultiCourt Barrier System at the Atlantic City Pickleball Open and it performed excellently... It is an easy and complete system to erect and takes up minimal space for storage. It is also far more stable than the traditional "pipe and drapes" used at most indoor events.

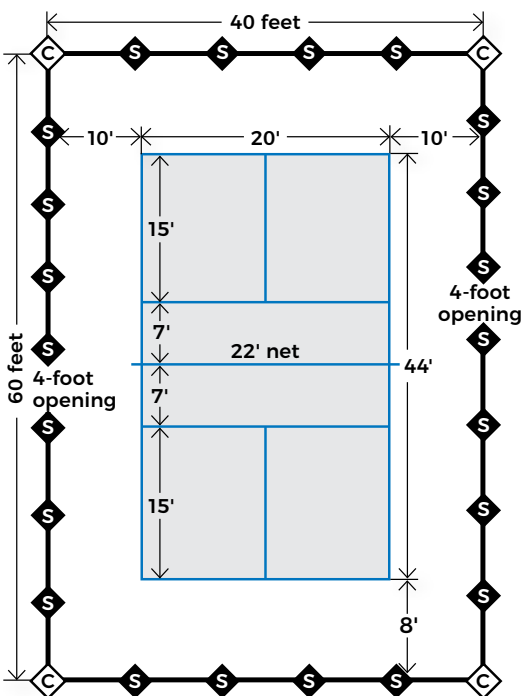

We loved how versatile the system was and how we could drape sponsor banners over the barriers. Would highly recommend!" —Jim

"We use these at our local park to easily block off balls, they can be set up to slide easily and stay upright without falling" —Josh

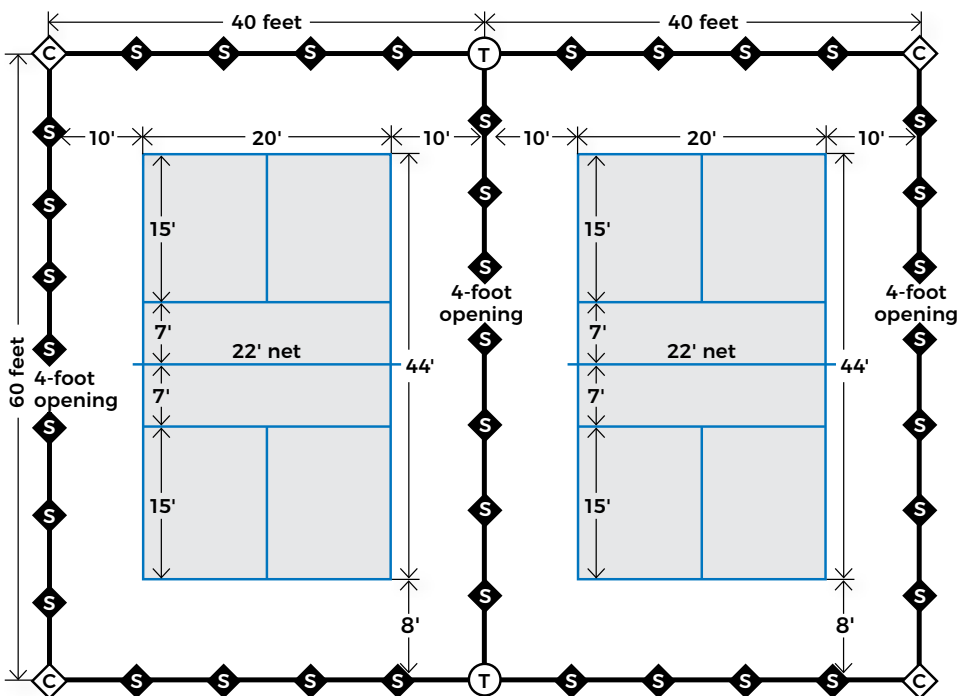

How many do you need? We'll help you figure it out.
