

# MultiCourt Barrier System™

## INSTRUCTIONS

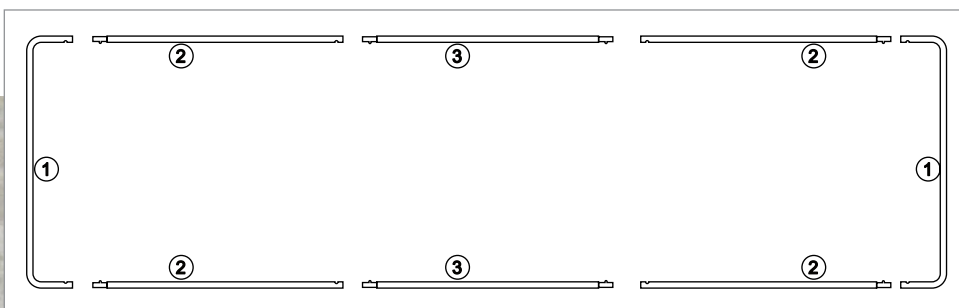

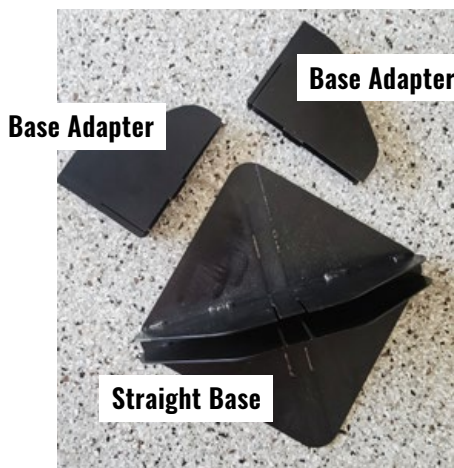

Congratulations on purchasing your new **ONCOURT OFFCOURT MULTICOURT BARRIER SYSTEM™!**  
Use this sheet to guide you through assembly and care to ensure years of use.

### STEP 1

Watch the “Set-Up Video” with step-by-step instructions on the product page at [www.OnCourtOffCourt.com](http://www.OnCourtOffCourt.com).

### STEP 2

Open the box in a spacious area to prepare all parts for assembly. This section of the instructions shows how to set up 1 barrier with 2 Straight Bases and 2 Base Adapters.

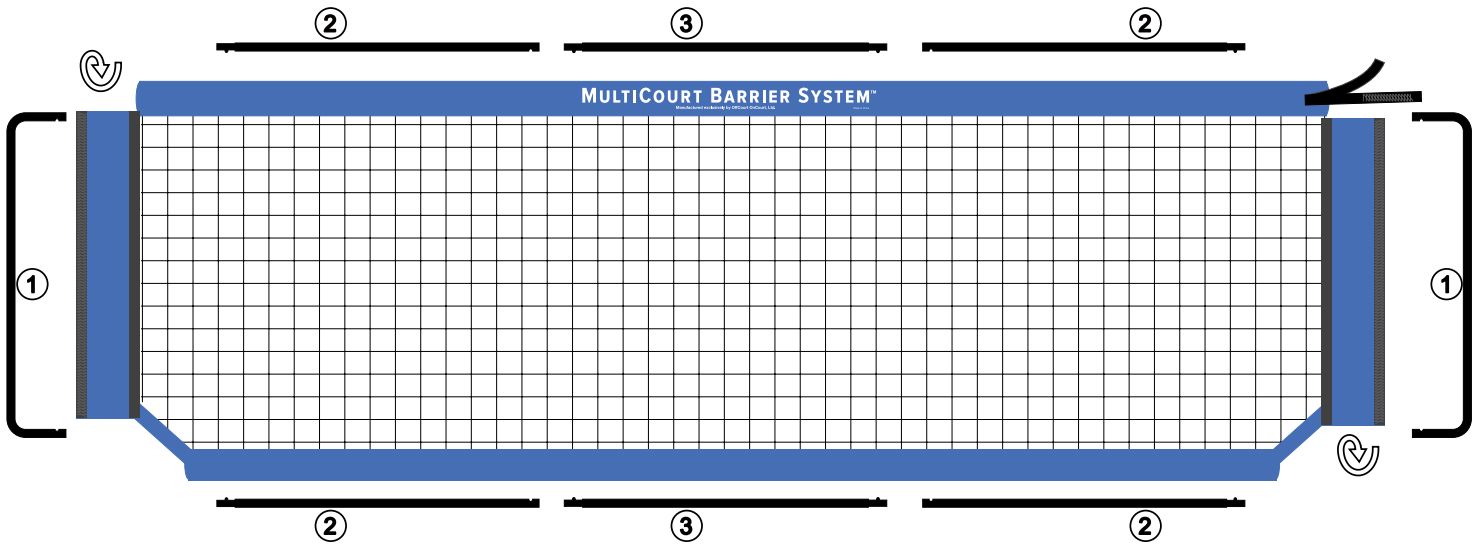

### STEP 3

After connecting the straight poles to form the top and bottom of the Barrier, insert these poles through the net sleeves.

# MultiCourt Barrier System™

## INSTRUCTIONS

### STEP 4

Connect the curved side poles to complete the frame. Then wrap and secure the Velcro sides of the barrier netting around these curved poles.

Note that the Velcro straps are not used for securing the netting to the frame. They are used to secure one barrier to the next - holding them together. Once the second Barrier is inserted into the base the Velcro strap wraps around the frame of the adjoining Barrier frame (not pictured).

### STEP 5

Insert the barrier into the Straight Base on each side and then add Base Adapters depending on your needs and desired configurations.

# MultiCourt Barrier System™

## BASE CONFIGURATIONS CHART

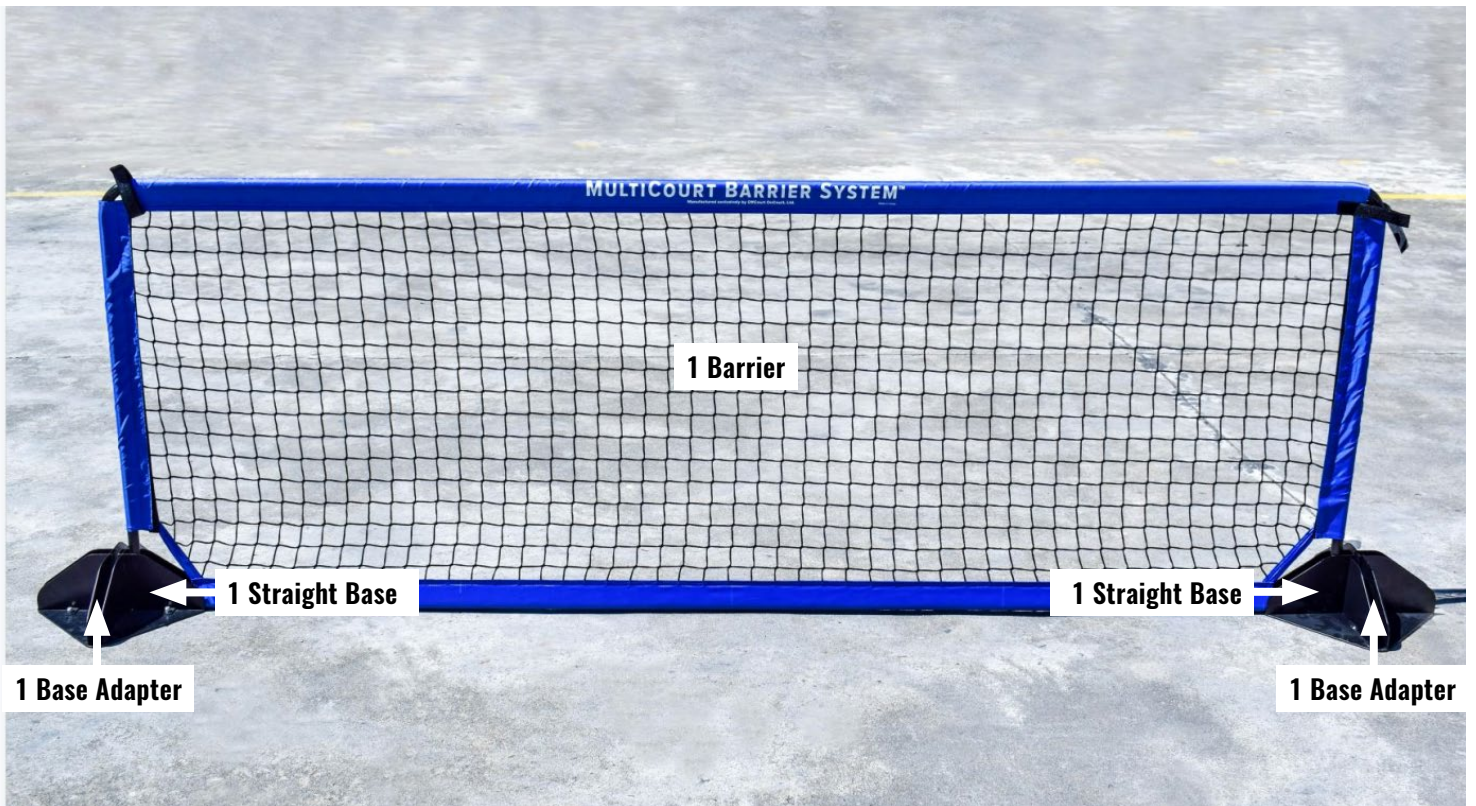

Notes: When 2 Barriers are connected end to end, each Barrier will only be inserted halfway into each Straight Base.

<p><b>STRAIGHT BASE</b></p> <p><b>Use 1 Straight Base plus 0 Base Adapter.</b></p>	
<p><b>CORNER OR TEE</b></p> <p><b>Use 1 Straight Base plus 1 Base Adapter.</b></p> <p>A Corner would be used if you are just forming a barrier around 1 pickleball court (2 barriers would connect) and a Tee would be used if you are forming a barrier around 2 pickleball courts (3 barriers would connect)</p>	
<p><b>CROSS</b></p> <p><b>Use 1 Straight Base plus 2 Base Adapters.</b></p> <p>4 Barriers can then be inserted into a Cross. Use when you are creating boundaries at the intersection of 4 pickleball courts.</p>

## IMPORTANT NOTES

### IMPORTANT NOTES

1. Court areas should be a minimum of 60 feet by 40 feet (to allow for the ideal playable area with a pickleball court measuring 44 feet by 20 feet) with 7 barriers along the length (the 60-foot side) and 5 barriers along the width (the 40-foot side) with a 4-foot opening for players to enter and exit along each long side.
2. The 4-foot openings (for players to enter/exit) on the side of each court can be placed either in the corner of the court or alongside one of the kitchen areas. In our diagrams, we have placed the openings next to the kitchen zones.
3. In our configurations and packages, we assume courts will be laid out side by side. For large tournament configurations requiring a minimum of 1000 barriers or bases, contact our office for Factory Direct pricing.
4. MultiCourt Barrier Systems are weather-resistant but not weather-proof. We do not recommend leaving them outside for extended periods of time.
5. Do not lean on or attempt to sit on the barriers.
6. The MultiCourt Barriers are 34 inches high and can be used as practice nets as well as court barriers to contain balls.
7. Tournament sponsor banners can be hung or draped over the top of the barriers as desired.
8. MultiCourt Barriers work for multiple sports and events to guide traffic flow!
