

**SET-UP INSTRUCTIONS**

Our patent-pending **Perfect Pitch Rebounder** comes in 10 pre-assembled sections and assembles in 2 minutes. Keep in mind the unit is wider than it is deep to orient the base correctly. The Perfect Pitch is easy to use in any open area in a club, home, or school. Plus, the unit sits on 4 large locking wheels. Super easy to roll in and out of storage!

Step #1: Lay out your parts. Most are pre-glued for very easy assembly. No tools needed.

Step #2: Insert 2 of the 5 straight pipes evenly through the 2 sleeves in the rebounder tarp.

Step #3: Form the base with 2 straight pipes in front and back. Insert the 4 vertical pipes.

Step #4: Add the 2 angled sections and one upper horizontal straight pipe as shown.

Step #5: Zip the tarp to create the release angle. Clip 4 straps as shown.

Step #6: The small foam tube is optional for harder hitters. It creates less rebound in confined practice areas.

Step #7: The larger square foam tube is optional for less advanced players. Add to top bar so ball rebounds downwards and rolls off the bottom of the tarp. It creates the least amount of rebound possible and gives the hitter more time to prepare.
