

This supplement to our Airzone, Mini Airzone, and E-Z Airzone instructions shows how to repair a potential problem very easily. Both packages have 6 bungee clips. If stretched too far, there is a chance the bungee can pull out of the bungee clip.

1) The bungee clip comes in two parts: The clip itself and the lock ring. There are 2 ways to reinstall the bungee into the clip. First is with tape.

2) Trim the end, wrap it with tape to increase the grip of the clip, insert the bungee and slide the lock ring over the base of the clip.

3) The second repair option is to tie a knot on the end, pull it very tight so it is small enough to slide into the clip after trimming the excess.

4) When repaired, the bungee and bungee clip will snap seamlessly together and will look like the photo below. Pull apart with moderate force to test.
